WHEATON SECTOR PLAN AREA

The following demographic report for the Wheaton Central Business District (CBD) Vicinity Sector Plan Area describes the forecasted household growth and socio-economic characteristics of the study area. The detailed statistics are drawn from the Research and Technology Center's Round 7.2 Household Forecast and the 2008 Census Update Survey. Comparative data for the broader Kensington-Wheaton Planning Area and for Montgomery County as a whole are included.

The Wheaton study area has approximately 2,300 households, over half of which are multi-family dwellings. In the next 30 years, almost all of Wheaton's anticipated population and household growth is expected to occur in multi-family housing, and at rates 2.5 times those countywide. Wheaton's relatively affordable housing, convenient public transit, and proximity to Washington, D.C.'s cultural and employment opportunities attract people moving from the District of Columbia, Northern Virginia, and other parts of Montgomery County. The residents are racially and ethnically diverse, and over one third are foreign-born. A substantial block of Generations X and Y (ages 18 to 44) who are typically single or young families without children defines Wheaton. The concentration of singles and young adults explains the area's lower median income (\$62,400, about two-thirds of the countywide estimate). Although well educated, many residents are young, just starting careers at entry-level salaries and a large share of households have only a single earner. While home ownership is affordable to the majority of owner-occupied households in the area, in contrast, over half of Wheaton's renters live below the affordable housing threshold.

DEMOGRAPHIC HIGHLIGHTS

- **Over half of Wheaton's housing stock is multi-family housing. Approximately 4,600 people live in 2,310 households in the Wheaton area.** Three out of five residents live in single-family dwellings even though over half of the housing stock is multi-family units. The distribution imbalance is due to the smaller average household size of multi-family homes (1.51 persons per multi-family unit) versus single-family homes (2.50 average). At 52 percent of the housing stock, Wheaton has a much higher concentration of multi-family units than what is commonly found in the surrounding Kensington-Wheaton Planning Area (19 percent) and the County (32 percent).

DEMOGRAPHIC HIGHLIGHTS CONTINUED

- **A big bump in multi-family units is expected in the next decade.** In the next 30 years, the number of households in Wheaton is forecasted to increase by 69 percent, which is 2.5 times the anticipated change for the County (27 percent). Between 2010 and 2040, Wheaton will gain about 1,800 households raising the area total to 4,400 homes. Nearly all of the anticipated population and household growth is expected between 2010 and 2020 and it will be new multi-family housing.
- **The relatively affordable housing, convenient public transit, and Wheaton's proximity to the District's cultural and employment opportunities, attracts people moving from Washington, D.C., Northern Virginia, and other parts of Montgomery County.** Of the 44 percent of households new to Wheaton, 19 percent moved from Washington, D.C. or Northern Virginia, another 16 percent came from other parts of the County, and 8 percent migrated from outside of the metropolitan region. Just over half of all Wheaton households (56 percent) lived in the area for more than five years compared to 71 percent of households in the surrounding planning area.
- **Wheaton is more diverse than the County as a whole.** As the minority share of Montgomery County's growing population continues to approach the midpoint (46 percent), Wheaton's population is already racially and ethnically diverse (minorities are 52 percent of the area's population). One quarter of the area's population is black or African American which is ten percentage points higher than what characterizes the surrounding planning area and the County. While the area has a greater representation of African Americans, there is a lower percentage of Hispanics (14 percent) compared to the broader Kensington-Wheaton area (26 percent). About 12 percent of the area's population is Asian. Over one-third of Wheaton's population is foreign-born many of whom are black.
- **Wheaton is characterized by a substantial block of Generation X & Y (ages 18 to 44) who are typically either single, or living with housemates, or young families without children.** The area's low percentage of children (10 percent compared to 24 percent countywide) is explained by almost half of Wheaton's households (47 percent) living alone or with unrelated housemates, i.e., not in a family. In contrast, only 40 percent of all Wheaton households are married-couples compared to 62 percent characterizing the County.
- **Employed residents take advantage of convenient public transit and Wheaton's proximity to the District's employment center.** In 2008, approximately 3,100 residents of Wheaton are employed. While typically 60 percent of people age 16 and over live and work in Montgomery County, only 40 percent of Wheaton's employed residents work within the County. Over half of employed Wheaton residents work in the District compared to less than one-quarter of all employed residents in the

DEMOGRAPHIC HIGHLIGHTS CONTINUED

County. Fifty-two percent of workers living in Wheaton commute by public transit, almost three times the typical rate for employed County residents.

- **The predominance of single households and the large block of young Generations X and Y reduce the area's median household income.** The estimated 2007 median household income in Wheaton at \$62,405 is only two-thirds of the County's median of \$96,475. The income discrepancy is attributed to a high percentage of single householders (39 percent) in the area. Also, even though the residents are well educated (68 percent having a Bachelor's, graduate, professional, or doctoral degree), many are young, and beginning careers with lower salaries.
- **Homeownership is more affordable, while renters in the area face a greater housing cost burden.** Homeownership in Wheaton is affordable for practically all owner-occupied households in contrast to less than half of the area's rental households meeting an affordable housing cost threshold. Many lower income households in Wheaton face the burden of housing costs even though the average monthly rental cost at \$1,192 is slightly below the mean rental rates at the County level.

overview

STUDY AREA DESCRIPTION

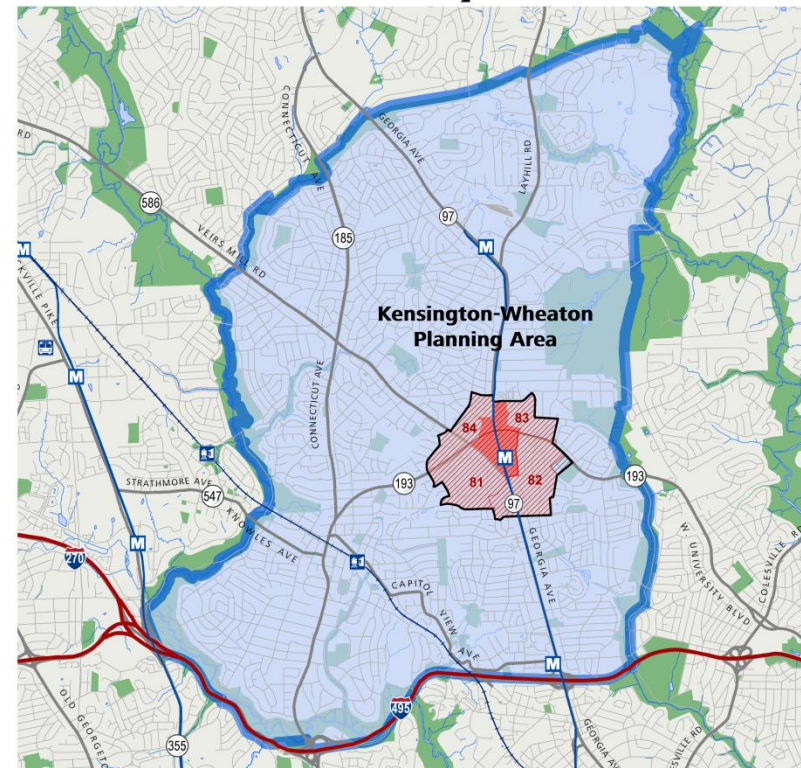

The Wheaton Central Business District and Vicinity Sector Plan Area lies outside the Beltway, north of Silver Spring along Georgia Avenue where Veirs Mill Road and University Boulevard intersect. Wheaton is a mixture of multi-family units and typically small 1940s detached houses surrounding a central business core of primarily small, non-chain store fronts and a regional shopping mall. The Wheaton Metro Station on the Red Line is conveniently walkable from most of the residential vicinity. The Wheaton Sector Plan Area is delineated by four traffic zones, numbers 81 through 84.

For comparative purposes, this report includes data for the larger Kensington-Wheaton Planning Area ("Kensington-Wheaton") as well as Montgomery County as a whole. The adjacent map illustrates the boundaries of the traffic zones defining the Wheaton Sector Plan, the Wheaton Central Business District and the surrounding Kensington-Wheaton Planning Area. Note that a small residential area of approximately 30 single-family households in the Sector Plan's eastern corner off University Boulevard lie outside traffic zone 82, and therefore, these households are not represented in this demographic profile.

POPULATION & HOUSEHOLD COUNTS (2008)

An estimated 4,600 residents live in 2,310 households in Wheaton. The study area accounts for about six percent of the Kensington-Wheaton Planning Area population. At about two people per household (1.99), the average household size in Wheaton is well below that of both Kensington-Wheaton (2.78) and Montgomery County (2.63).

STRUCTURE TYPES (2008)

Over half of the housing stock is multi-family. In 2008, there were about 2,310 occupied households in Wheaton. Approximately, 1,190 households or over half of the households (52 percent) in the area are multi-family dwellings, mainly mid-rise structures. This constitutes a much higher concentration than found in the surrounding Planning Area (19 percent) and the County (32 percent). The remainder of the area’s housing stock (1,120 units) is single-family detached dwellings or townhouses.

Three out of five residents live in single family dwellings even though over half of the housing stock is multi-family units. The distribution imbalance is due to the difference in household size for each structure type. On average, there is one more person living in a single-family dwelling (either a detached home or townhouse averaging 2.50 people per house) than what typically resides in an apartment or condominium (1.51 persons per multi-family unit).

growth forecast

2010 to 2040

HOUSEHOLD GROWTH

Wheaton's forecasted household growth outpaces the future rates for the surrounding area and the County. In the next 30 years, the number of households in the Wheaton area is forecasted to increase by 69 percent. This increase in local housng is five times the rate of growth expected for the Kensington-Wheaton Planning Area (14 percent) and 2.5 times the anticipated change for the County (27 percent). Of the forecasted growth in Kensington-Wheaton, 44 percent of the housing increase will occur in the Wheaton CBD and vicinity.

A bump in multi-family units is expected in the next decade.

Between 2010 and 2040, Wheaton will gain about 1,800 households raising the area total to 4,400 homes. About 70 percent of this household growth is anticipated in the next decade. Nearly all of the increase (98 percent) is expected to be new, multi-family units.

demographic highlights

2008

DATA NOTE

All data is from the M-NCPPC Research & Technology Center's 2008 Census Update Survey. As noted in the overview, Wheaton refers to the demographic study area (comprising traffic zones 81 through 84), while Kensington-Wheaton refers to the surrounding Kensington-Wheaton Planning Area, of which Wheaton is a part.

AGE

Wheaton's population is comparatively older than that of the County as a whole. The average age of Wheaton residents is 42, four years above the County's average of 38. This reflects the substantial block of Generations X & Y (age cohorts 30 to 44 and 18 to 29) defining the area; a cohort without the typical presence of children. The area has a noticeably higher percentage of young adults under 30 (19 percent) and 30 to 44 year olds (26 percent) compared to the County (13 and 21 percent, respectively). With multi-family units comprising half of the area's housing, the study area offers affordable options for young adults, and singles.

Children are uncommon in the community. With only 10 percent of its population under 18, Wheaton has a much lower percentage of children than the typical quarter of the population characterizing the broader area and the County. The area's low percentage of children is notable for the absence of children living in multi-family units which make up half of the area's housing stock.

The slightly higher share of elderly in the area are living in single-family homes. Fifteen percent of Wheaton's residents are ages 65 or older which is a few percentage points above the elderly level for the County. Most of Wheaton's elderly

residents (69 percent) live in single family homes and have chosen to age in place rather than move to retirement communities.

RACE & HISPANIC ORIGIN

Wheaton is more diverse than the County as a whole. Minorities make up 52 percent of Wheaton’s population which is a higher concentration than what is reported at the County level (46 percent).

One quarter of the residents is black or African American which is ten percentage points higher than what characterizes Kensington-Wheaton and the County. While the area has a greater representation of African Americans, there is a lower percentage of Hispanics (14 percent) compared to the broader planning area (26 percent). At 12 percent, Asians are about as commonly found in Wheaton as they are in the County as a whole.

*may be any race			

FOREIGN BORN

Wheaton, as well as the County, has a substantial foreign-born population. One in three people in the area (34 percent) are foreign-born which is a higher concentration than the County as a whole (29 percent). New and affordable housing in Wheaton attracts new County residents, many of whom are foreign-born. Single-family households in the area have a higher percentage of foreign-born head or spouse (44 percent) compared to multi-family homes (36 percent).

LANGUAGE ABILITY

With a significant proportion of foreign-born residents, Wheaton has a high incidence of foreign language speakers. About half of the population age 5 and older (48 percent) speaks a language other than English at home. Yet only 14 percent of residents judge their ability to speak English less than “very well”. This rate falls between

the 18 percent characterizing Kensington-Wheaton and 11 percent countywide.

Wheaton has a lower percentage of Spanish-speaking households compared to the broader planning area. Among the study area households, 10 percent are Spanish-speaking, a lower percentage than the 16 percent reported for the wider planning area. A smaller percentage of Spanish speaking households in Wheaton is expected as Hispanics have a greater representation in the broader Kensington-Wheaton area (26 percent) than in the central Wheaton area (14 percent). In Wheaton, a higher concentration of Spanish speaking households live in multi-family dwellings than single-family houses (17 percent and 2 percent, respectively).

Households	2,310	29,030	357,000
Households Speaking Spanish	10%	16%	11%

EDUCATIONAL ATTAINMENT

Wheaton residents are well-educated. A relatively large share of area adults ages 25 and older have a bachelor's degree or higher: 68 percent of the adults versus 63 percent in Kensington-Wheaton and 66 percent countywide. Living in one of the most highly educated counties in the country, Wheaton residents are just as likely to have an advanced degree (37 percent) as anyone in the County. Only 2% of the area's adult population has less than a high school degree compared to 10 percent of the broader Kensington-Wheaton area. A relatively high proportion of adults with an associate or trade school degree live in Wheaton (11 percent compared to 6 percent in the County) and they typically reside in a single-family home.

Multi-family units are stocked with college graduates. In Wheaton, adults with at least a college degree are more likely to live in multi-family households (80 percent) than single-family dwellings (60 percent) reflecting the well educated Generation Y and the Baby Boomers choosing affordable multi-family living quarters convenient to the Metro station.

EMPLOYMENT

Approximately 3,100 area residents are employed. The study area accounts for 7 percent of the employed residents in the Kensington-Wheaton area. Three-quarters of women age 16 and older in Wheaton work, which is a higher work force participation rate for women than what is found in the surrounding planning area and the County (both at 66 percent).

The area's proximity to Metro's train and bus transit attracts residents who work in the District and commute by public transit. While typically 60 percent of all residents over the age of 16 live and work in Montgomery County, only 40 percent of employed Wheaton residents work within the County. Over half of employed residents work in the District compared to less than one-quarter of all employed residents in the County. Fifty-two percent of workers living in Wheaton commute by public transit, almost three times the typical rate for employed County residents.

Over half of employed residents work in the private sector. Almost one quarter of employed Wheaton residents work for private, non-profit firms: twice the rate typical in the County. Only one third works in the otherwise more common private for profit sector. Government workers (28 percent) are another large share of the resident workforce. The remainder is self-employed (10 percent) or some other employer category (5 percent).

Self-employed	10%	11%	11%
Government	28%	25%	25%
Other	5%	8%	7%

COMMUTE ALTERNATIVES

The convenience of the nearby transit options in Wheaton drives commuter's high rate of public transit use. Fifty-two percent of workers living in Wheaton commute by public transit, which is almost three times the typical rate for all employed County residents. Since over half of the employed Wheaton residents work in the District, hopping on the Metro is a convenient commuting option for many.

More time spent using public transit increases Wheaton's overall average commuting time. The overall average commuting time of 42 minutes for a Wheaton resident is raised by the area's high percentage of public transit users with longer commutes (50 minutes). In comparison, the average commute for all County workers is just over a half hour.

Commuting by car from Wheaton is quicker than public transit, but it still takes longer than the average car trip. The average Wheaton resident commuting by car drives 37 minutes, which is 8 minutes longer than the average drive time for all employed residents.

CAR OWNERSHIP

Car ownership rates are below average. Households in Wheaton own an average of 1.3 cars, versus 1.9 in Kensington-Wheaton and Montgomery County as a whole. Notably, 20 percent of households in Wheaton do not own a car compared to only 4 percent of households countywide.

Not owning a car is an option for many multi-family households. The average number of cars per multi-family household is less than one (0.8 cars per unit) compared to almost two cars for each single-family detached or townhouse (1.8 cars per dwelling). In Wheaton, 40 percent of residents in multi-family units do not own a car, four times the rate at the County level.

Work Trip by Mode

Source: M-NCPPC 2008 Census Update Survey

Average Commute Time (in minutes)

Source: M-NCPPC 2008 Census Update Survey

HOUSEHOLD SIZE

Wheaton households are smaller than average. The area’s prevalence of multi-family units with a low average household size (1.51) drives down the overall average to two people per household in the Wheaton area. This is notably lower than the average number of people per household for the planning area (2.78) and the County (2.63). Smaller households of aging baby boomers and young adults are drawn to the area’s affordable housing, convenient public transit, and proximity to the District.

Two out of five households have a single householder. Singles heading 39 percent of Wheaton’s households are far more common than the countywide rate of 24 percent living alone. Only a quarter of Wheaton’s households have three or more people compared to about 44 percent of all County households. There are not many children in the local area and most households have only one or two adults.

HOUSEHOLD TYPE

An equal mix of married-couples and singles live in Wheaton. The two predominant household types are married-couples (40 percent) and single householders (39 percent). An unusually high concentration of singles lives in Wheaton compared to less than one quarter of overall County households. On the flipside, only 40 percent of all Wheaton households are married-couples compared to 62 percent characterizing the County.

Family household types, comprising a slight majority in Wheaton, are far less common than typically found countywide. Families including married couples with and without children and single parents are far more common across the County. Three out of four households in the County are families compared to just about half of the households in Wheaton. Almost half of Wheaton’s households are either living alone (39 percent) or are unrelated housemates (8 percent), i.e., not a family household. The vast majority (80 percent) of nonfamily households is single and lives in a multi-family dwelling.

Live Alone	39%	22%	24%
All unrelated	8%	4%	2%
Average Household Size	1.99	2.78	2.63

HOUSEHOLD MOBILITY

Households turn over on par with the general County pace. Over half of Wheaton households, 56 percent, have lived in their same home for five or more years compared to 60 percent of all households in the County. Area residents have lived in their current homes for a median of six years, very close to the Countywide median of seven years. In contrast, Wheaton households are more mobile when compared to the stable, predominately single-family neighborhoods of the Kensington-Wheaton Planning Area. Wheaton households are less likely to have been in place for five or more years than neighbors in the broader Kensington-Wheaton Planning Area (56 percent versus 71 percent of surrounding households) and they report a shorter length of time living in the same home (six and ten years, respectively).

Less transiency is expected as new condominium owners stay in place. The median length of residency of multi-family units at 5 years is two years less than the occupation of single-family housing (7 years). Since the multi-family units are primarily owner-occupied, fewer turnovers may be expected as the relatively new multi-family condominiums are in place for a longer period of time.

Wheaton's affordable housing, convenient Metro, and proximity to the District's cultural and employment opportunities attracts people moving from the District of Columbia, Northern Virginia, and within Montgomery County. Of the 44 percent of households new to Wheaton, 19 percent moved from Washington, D.C. or Northern Virginia, another 16 percent came from other parts of the County, and 8 percent migrated from outside of the metropolitan region.

IN-MOVER HOUSEHOLDS

Most new County residents moving into Wheaton previously lived in Washington, D.C. or Northern Virginia. About 28 percent of the area's households are new to Montgomery County. Among these new County households recently choosing to live in Wheaton, two-thirds of these in-mover households come from the District or Northern

Virginia and about another quarter of new households formerly lived outside of the metropolitan region.

HOUSEHOLD INCOME (2007)

The large block of young Generations X and Y and predominance of single households reduce the area’s median household income. The 2007 median household income in Wheaton of \$62, 405 is only two-thirds of the County’s median of \$96,475. This difference may be ascribed to a high percentage of single householders (39 percent) living in the area. Also, even though the residents are well educated, many are young, starting at the lower salary range of a career.

The median income of Wheaton’s households significantly differs by structure type. The 2007 median income of single-family households (\$108,590) is more than twice that of incomes associated with multi-family units (\$42,015). This income discrepancy is attributed to younger singles in the area just starting their careers living in multi-family households in contrast to the more mature, dual income households characterizing single-family housing. Since more than half of the households in Wheaton are multi-family with a much lower incomes (41 percent have incomes less than \$30,000), the overall median for the area is lowered.

2007 Household Income Distribution

Source: M-NCPPC 2008 Census Update Survey

HOUSING TENURE

Wheaton homeownership rates are high considering over half the housing stock is multi-family. The percentage of rental units in Wheaton is only slightly higher than the County’s (28 percent and 25 percent, respectively) even though 52 percent of the housing in the area is multi-family. Multi-family housing is typically rental at the County level. Yet in Wheaton, offering condominiums near the Metro, 53 percent of the multi-family units are owner-occupied. About 8 percent of the single-family dwellings are rented in the area.

HOUSING COSTS

Homeownership is more affordable in Wheaton. In 2008, the average cost of owning a home in Wheaton was \$1,667 per month, which is 20 percent less than \$2,000 averaged countywide. Homeowners in the area bear less of a housing cost burden compared to the surrounding Planning Area and the County. Only 16 percent of homeowners reported spending more than 30 percent of their income for monthly housing costs, slightly less than the 19 percent below the benchmark countywide, and notably below the 24 percent of Kensington-Wheaton cost-burdened homeowners

Rental costs are below the County average, yet renters in Wheaton face a greater housing cost burden . In Wheaton, although the average monthly rental cost at \$1,192 is only \$135 below the mean rental rates at the County level, over half of the rental households in Wheaton are spending more than 30% of their income on housing costs contrasted with one third of all renters in the County.
