

# Summary Results

## Most populous jurisdiction in Maryland on track to 1 million mark

Montgomery County's July 1997 estimated total population of 832,400 is a 9 percent increase from the U.S. Census Bureau's revised April 1990 estimate of 762,207. Of the total population, 823,500 people are household members, and approximately 8,900 live in institutions such as prisons, school dormitories, and nursing homes. Yearly growth averaged 9,700 persons, an average annual percentage growth rate of 1.3 percent, which is half the phenomenal rate witnessed in the 1980s, but still substantial. Montgomery County will cross the one million-population mark in 2020. Please note that unless otherwise indicated, this report describes the characteristics of the household population, not the total population, which includes those residing in group quarters.

Figure 1: County Growth Trends 1950-2020

## Continuing trend of racial diversity

As evidence of our increasing diversity, all of our population growth has been in the minority segments of the population since 1990. The immigrating minority population contributed overwhelmingly to Montgomery County's high growth periods. Between 1970 and 1980, the increase in nonwhite population accounted for 107 percent of the total population growth. During the County's high growth period, 1980 to 1990, when the total population increased by one-third, 60 percent of this growth was new, nonwhite residents. As evidence of the County's increasing diversity, between 1990 and 1997, minorities

Figure 2: Annual Population Growth Rate and Minority Share of Growth

accounted for 120 percent of the total population growth. Since 1970, the minority population in Montgomery County has increased nearly ten fold.

According to the 1997 Census Update Survey, 73.0 percent of Montgomery County's resident population is white, 13.4 percent are black and another 10.9 percent are Asian or Pacific Islanders. Those of Hispanic or Latino origin (of any race) comprise 8.6 percent of the County's residents. In comparison, the nation is 82.7 percent white, 12.7 percent black, 3.7 percent Asian, and 11.0 percent Hispanic/Latino. Montgomery County has the largest Hispanic and Asian populations in the State; in fact, almost half of Maryland's Hispanic and Asian populations live in the County. Hispanics/Latinos, with an annual growth rate since 1990 of 6.1, percent is the fastest growing minority group in the County, followed by Asians at 5.3 percent growth per year. The black population increased by 4.1 percent per year while the non-Hispanic white majority has a negative annual growth rate of -0.3 percent.

Gateway Montgomery: most new households are from outside the region

About 69,670 households, or 22.4 percent of the County's dwellings, did not live here five years previous to the 1997 Census Update Survey. Most new residents (i.e., those households that moved into the County between 1992 and 1997)

come from outside the Washington, D.C. metropolitan area. This percentage share at 57 percent has been constant across the surveys completed since 1984. The second most popular former place of residence is Washington, D.C. contributing 9,470 households, or 13.6 percent, of all in-movers, just edging out neighboring Prince George's County at 12.7 percent. Less than 5,000 households between 1992 and 1997 crossed the Potomac River to relocate in the County from Northern Virginia.

Figure 3: Previous Location of New Residents

Montgomery County is an active gateway, attracting 25 percent of all movers relocating in Maryland, approximately, 223,600 people. Of the different categories of movers into the state, the County draws 48 percent of the 38,350 total immigrants, 27 percent of all the 38,250 movers from Washington, D.C., and 23 percent of the 171,100 interstate movers. Montgomery County is not a population sinkhole; 6 percent, or approximately 47,100 people, move out per year and the County is the fourth largest source of Maryland's intra-state movers.

Foreign-born immigration spurs County's growth and cosmopolitan milieu

The percentage of persons born outside the United States and currently living in Montgomery County has risen from 18.6 percent in 1990 to 21.9 percent in 1997. Moreover, almost one-third of the County's population lives in a household where the head or spouse is foreign-born. Compared to the rest of the County, the population in

these households is characterized as younger with more children, more diverse, greater extremes in educational attainment, and more likely to work for private firms than the government.

#### New residents contribute to County's high level of educational attainment

One characteristic that sets Montgomery County apart is the high level of education attained by its adults; 59.3 percent of the County's population 25 years or older has a Bachelor's degree or higher, compared to 23.6 percent nationally. This percentage is up since 1990, when half of this age group held at least a Bachelor's degree. Additionally, three out of ten adults in the County have a Master's, professional, or Doctoral degree.

**Figure 4: Percentage of Maryland's Foreign-Born Residing in the County**

The County attracts highly educated adult movers; the many mid- and upper- level technology and federal government jobs in the County necessitate a highly educated workforce. Of the adults 25 years or older who moved into the County between 1992 and 1997, 70.7 percent have a Bachelor's degree or higher. The growing proportion of foreign-born and minority populations contribute to the County's high level of educational attainment. Foreign-born residents are just as likely to hold advanced degrees as native-born residents, 31 percent of each group. Actually, the County's foreign-born population is characterized by the extremes – 12.4 percent have less than a high school diploma (6.9 percent for the nation) and another 10.2 percent hold a doctorate degree (nationally, 6.2 percent). Educational attainment of minorities in the County far surpasses national level statistics.

**Figure 5: Educational Attainment in 1990 and 1997**

#### Maturing County is aging in place

Montgomery County is a maturing suburban county with an aging population and declining household mobility. The median age of all heads of households increased since 1987 from 44 years to 47 years in 1997. The influence of the younger, new in-mover households averaging 39 years of age and heading one-fifth of the County's households is ineffectual in swaying the balance of the median age when the average age of over half of long term resident householders is 56. Householder age is expected to continue creeping upwards as the dominating post-World War II baby boomers age. Montgomery County, as did nearly every state in the nation, recorded a decline in the

number of householders ages 25 to 34, a natural result of the aging baby boomers and the smaller cohort of the Generation Xers. Boomers are not only advancing in years, they are aging in place. Between 1987 and 1997, the frequency of overall residential turnover and mobility in the County declined as the median length of residency rose from 5 years to 6 years.

#### Senior population increased by one-third since 1987

In 1997, approximately 93,620 people over the age of 65 years live in Montgomery County. Of the elderly residents, 43.8 percent are over 75 years old. Between 1987 and 1997, Montgomery County's elderly population increased by one third, or 3.3 percent annually, while the number of frail elderly, those 75 years of age and older, increased by 71.2 percent during this same time period, from 23,945 to 41,000, amounting to a gain of 7.1 percent a year. As a percent of the total County population, the over 65 years age group grew from 10.5 percent in 1987 to 11.4 percent in 1997. According to the current population forecast, the percentage of elderly in the County is expected to increase to 12.9 percent in 2010, the brink before baby boomers join the over 65 ranks, and continue upward to 14.9 percent of the total population by 2025.

#### Average household size drops a person since 1960

After decades of declining average household size from 3.65 in 1960 to 2.62 in 1987, the trend appears to be bottoming out. The County's average household size showed a slight up-tick to 2.65 in 1990 and subsequently has remained stable at this point through 1997. Many competing factors affecting household size are at play as the County's underlying demographics change. Factors holding down the average size include the unlikelihood that the level of births in the near future will revisit the birth peak of 1990. The crest of the prevalent baby boomer households, in their mid-fifties in 2000, is moving into the empty-nest stage. Baby boomers blessed with increasing longevity mean more married couple households later in life, but also more single-person households of very elderly persons beginning in 2020. On the other hand, the high fertility rates of recent immigrants and the County's current immigration pattern of consolidating families in this country appear likely to continue and tend to bring larger households. The latest household forecast predicts a relatively stable household size until 2005, and then a drop to 2.50 persons per household in 2025.

**Figure 6: Average Household Size 1950-1997**

#### Increased labor force participation by women

Gains in Montgomery County resident employment figures have been achieved mainly through increases in jobs held by women. Growth in resident female employment accounts for 60 percent of the County's 80,800 resident employment gain from 1987 to

1997. The average annual growth rates of employed female residents consistently outpace the employment growth of the males in the County. On an annual average percentage basis, female gains were almost 2.5 times greater, 1977-1987, and over 1.5 times greater, 1987-1997. Within the resident female work force, the number of participants increased by 28 percent between 1987 and 1997, from 181,033 to 231,550, outpacing the rate for men, 16 percent, or from 199,655 to 232,525. During the early 1990's recession, increases in female participation surmounted the deficit of job loss among males (9,689 versus -687 jobs, respectively) to post a positive gain at the County level (6,942). Currently, equal numbers of men and women are in the resident workforce, approximately 232,000 each; the gender gap rapidly narrowed from a 44,000 difference in 1977 to 18,600 in 1987. Any additional increase in women's work force participation rates will result in more females than male residents employed.

**Figure 7: Labor Force Participation of Women 1950-1997**

#### White-collar defines the resident workforce

In Montgomery County, four out of seven employed residents are either executive/managers or professionals. An incredible 36 percent of employed residents are in professional occupations such as teachers, scientists, or doctors. As perspective, only 13 percent of workers are professionals in the United States. Another one fifth of employed residents are executives or managers, twice the percentage found in the nation's workforce. With this block of white-collar employees, no wonder educational attainment figures and household incomes in Montgomery County are so high.

#### County's median household income is nearly twice the Nation's

Montgomery County is prosperous and affluent, as is the Washington, D.C. region, basking in the federal government and robust high tech rays. In the race of highest incomes, the County bests several marks. Its estimated 1996 median household income at \$66,085 is 86 percent higher than the nation's \$35,500, 40 percent higher than Maryland's \$47,100, and vies with Howard County for the number one position in the state. Over a quarter of the County's households pull in

**Figure 8: 1996 Median Household Incomes of the County and the Nation**

incomes of \$100,000 or more. According to the U.S. Census Bureau, the nation's share of households with incomes of \$100,000 or more is at an all-time record high. In 1996, 8.2 percent of the United State's households - or 1 in 12 - reported total income of at least \$100,000. In Montgomery County -- 2 out of 7 households exceed \$100,000 -- a household is three times more likely than the national norm to have such high income.

Montgomery County's lofty household incomes are fueled by high paying jobs, rewarding the well-educated resident work force in a variety of professional and managerial occupations. Behind today's record level of affluence are the dual-income couples of the baby boom generation reaching their peak-earning years. Of the 85,200 County households with incomes of \$100,000 or more, 68 percent are dual-income couples similar, to 65 percent across the nation. The rising economic fortunes of dual-income households should boost household income for another ten years.
