CAMPUS VISIONING PHASES

The BSE will connect with existing buildings to the north while establishing a strong presence at the entry points and along the wetlands pedestrian area. In addition to its interior programmed space, the building will define the outdoor rooms of various scales and uses. Simultaneously, exterior will intertwine with interior, creating an immersive landscape-based experience on multiple levels.

The BSE will be a visionary building that brings cohesion to a vibrant campus, advancing USG’s identity and cementing its position as a leader in STEM education.
