To help carry out the rural features of the General Plan, the Park and Planning Commission needs the help of a Natural Resource Advisory Committee. This Committee's role would be to advise the Commission on all resource subjects, expressing the needs of natural resource businesses and helping to formulate equitable means of regulating harmful or objectionable activities. The Committee will have Commission staff assigned to it to help it define resource potentials in rural areas, promote resource development in accordance with the General Plan, and supervise resource use. The Committee should also be extremely valuable in bringing about closer intergovernmental cooperation and action, and in providing convenient information services in the field of natural resource development. Its activities should be designed to inform the residents of the open space wedges about the complete range of assistance programs available to them, and help them to make the most of their natural resources.

Members of the Natural Resource Advisory Committee will include professional farmers and members of State and local agencies concerned with agricultural, forestry, conservation, mineral extraction, and recreational uses of land and water in the Regional District, and will report directly to the Commission. The Committee's assigned staff will provide professional planning skills in the field of natural resource protection and development. In addition to assisting the Resource Committee, this staff will assist in the preparation of detailed master plans, working very closely with County Agricultural Agents; Soil Conservation Districts; the State Departments of Forests and Parks, Game and Inland Fish, Geology, Mines and Water Resources; the Interstate Commission on the Potomac River Basin; the U. S. Army Corps of Engineers; and the Natural Resources Institute at the University of Maryland.

Our nation, looking toward a future of continuing economic progress, is well advised to take stock of its natural resources.

—Twentieth Century Fund
