

## **APPENDIX 8: WATER AND SEWER CAPACITY**

### **From the Germantown Master Plan, 1989**

The Germantown planning area is intended to use public water and sewer systems consistent with the planning and policies established in the Comprehensive Water Supply and Sewerage Systems Plan. WSSC provides community water and sewer service in the Master Plan area. A few properties in the planning area still use individual on-site wells and septic systems. This Master Plan recommends that the entire study area be included in the public water and sewer service envelope.

A substantial portion of the planning area lies within the Little Seneca Creek watershed and drains directly to Little Seneca Lake. Protect the lake as an emergency drinking water source.
